

**INTRODUCTION TO THE OBSERVATIONS OF THE
GLOBAL ELECTRO-OPTICAL OBSERVATION
NETWORK**

Sciences, Shanghai, China,
zhengjinghui@shao.ac.cn*

In recent years, with the rapid development of aerospace activities, the number of GEO targets (including artificial satellites, space debris, rocket wreckage, etc.) has increased year by year. In order to grasp the situation of GEO or HEO/MEO, Shanghai Astronomical Observatory is building a global observation network. This presentation aims to make an introduction to the observations of the network.
